Creating Software Businesses Want

Exclusive to SybizCover Customers

SybizVision

Service Manager

THE IDEAL SOLUTION FOR SERVICE RELATED BUSINESSES

New Service Task grid

The Sybiz VSM Service Task screen has been given an overhaul and you now have greater functionality and flexibility. You can customise your grid columns when viewing a particular service task. Simply right click on a column heading then drag and drop the column onto or off the grid. You can also sort and group by column heading, which makes life easier when searching for specific service tasks, customers or technicians.

Sybiz VSM Mobile

Sybiz VSM Mobile enables organisations operating Sybiz Vision Service Manager to send job information to PDA-equipped technicians in the field, and track the progress of jobs through information entered into the PDAs. Data is transferred in real-time over the internet through a standard PDA device, giving technicians the ability to provide comprehensive service to clients.

Benefits of Sybiz VSM Mobile include the ability to:

- save on mobile costs
- save on petrol and vehicle expenses
- reduce paperwork
- improve customer service

Please note this is a separate module and requires Sybiz Vision and Sybiz VSM to run.

Sybiz has changed the timing of its annual major software release from the fourth quarter of the financial year to the second quarter. Sybiz believes that this change will enable you to upgrade your software at a more convenient, and usually quieter, time of year. We are committed to our customers and continue to create software businesses want!

Sybiz is proud to introduce three new modules that compliment the Sybiz range. They are:

- Sybiz Vision Business Intelligence Centre
- Sybiz Vision Service Manager Mobile
- Sybiz Vision Advanced Printing for Sales & Purchases

This document lists the features of the new modules and some of the enhancements we have made to our existing products.

SybizVision

Inventory

THE POWERFUL STOCK CONTROL SOLUTION

Stocktake preview prior to processing

A new option in Sybiz Vision enables you to preview and/or print stocktake variances before actually processing a stocktake. In the past you could not easily cross check figures prior to processing and may have spent hours reconciling stock accounts as a result of data entry errors. The new option enables you to find errors before committing to the stocktake. It also enables you to see if any items have been missed so you will not have to enter and process another stocktake.

SybizVision

Job Costing

IDEAL SOLUTION TO CONTROL YOUR TIME AND MATERIALS

Staff Time Analysis report by staff member

A simple but effective change has been made to the Job Costing Staff Time Analysis report. You now have the option to produce this report based on a particular staff member. This can show management the time spent by the staff member on each job, how much the staff member is costing the company and the profit margin being made from the staff member.

SybizVisipay

THE EASY, FLEXIBLE, SECURE PAYROLL SOLUTION

Advanced Payslip Forms

The Advanced Payslips Forms enhancement in Sybiz Visipay delivers flexibility by enabling you to create your own Crystal® payslip form. You can customise the form to display timesheet information directly on the payslip, giving your employees more information about the work they have performed.

Please note Sybiz Visipay is only available in Australia.

SybizVision

Business Intelligence Centre

QUALITY DECISIONS THROUGH ADVANCED REPORTING

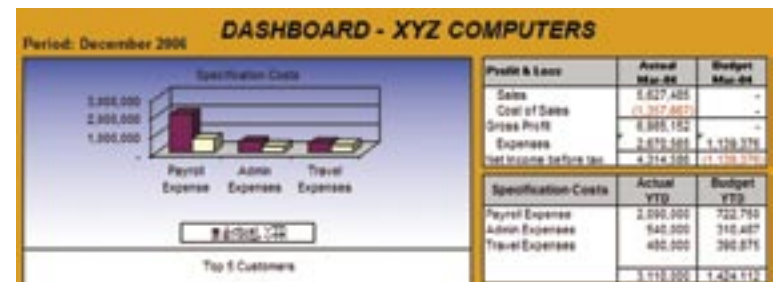

Increase quality business decisions through Advanced Reporting

The Sybiz Vision Business Intelligence Centre (BIC) gives Sybiz customers the benefits of automated Microsoft Excel® reporting. Sybiz Vision BIC is a new Sybiz Vision add-on module that dynamically links to your Sybiz Vision accounting data, taking your business to the next level of reporting. With Sybiz Vision BIC you can generate spreadsheets by simply extracting Sybiz Vision accounting data and converting it into an easy to read format.

Sybiz Vision BIC includes a variety of useful management reports including a Monthly Management Pack, Sales, Purchases and Inventory Master reports, and Dashboard-style reports.

The benefits of Sybiz Vision BIC are endless, from being able to customise the output and format in which your data is displayed, to the time you will save by not having to export and format data.

Please note this is a separate module and requires Sybiz Vision to run.

SybizVision

Advanced Printing

THE FAST AND USER-FRIENDLY PRINTING SOLUTION

Advanced Printing for Sales & Purchases

Sybiz Vision Advanced Printing is a new Sybiz Vision module. It delivers flexibility by enabling you to print multiple documents to multiple printers and bins, and print multiple copies of each document. This is ideal if you want to process a sales invoice and at the same time generate a picking slip at the warehouse so your store personnel can assemble goods for delivery.

The benefits of the Sybiz Vision Advanced Printing module include the ability to:

- create your own customised Crystal® forms to be used throughout transaction processing
- print multiple forms from one transaction
- print to multiple printers and various bins
- produce multiple copies of forms

Please note this is a separate module and requires Sybiz Vision to run.

SybizVision

Point of Sale

THE SOLUTION FOR RETAIL SALES

New look and feel for Sybiz Vision Point of Sale

The Sybiz Vision Point of Sale module has had a makeover. You now have greater functionality and flexibility, and additional information can now be displayed on the screen and on the new customisable docket.

You can resize the Sybiz Vision Point of Sale screen to full screen or to any size that suits your needs. Additional notes can now be displayed for each product and notes can be separated clearly by allocating a particular colour to each type of note. You can also customise the product list by hiding certain product groups. This will minimise data entry errors when an operator needs to look up a product code.

For more information on these great changes and for a demonstration of the franchise/up-selling options, please contact your Sybiz Authorised Business Partner.

Why is a customer on credit hold?

In the past you could not take a customer off credit hold while processing a sale in Sybiz Vision Point of Sale. You had to do it from Sybiz Vision so you had to find a terminal on which Sybiz Vision was running. You can now take customers off credit hold from within Sybiz Vision Point of Sale at the time a sale is being processed.

In addition to this new functionality you can edit the customer's details from within Sybiz Vision Point of Sale and view the reason why the customer was placed on credit hold. Note: a 'Reason for credit hold' field has been added to the Customer Maintenance screen in Sybiz Vision.
